Sample Modern Physics Multiple Choice Questions and Explanations

Question 1: Photoelectric Effect

When light of frequency below a certain threshold illuminates a metal surface, no electrons are emitted. Which statement best explains this phenomenon?

- A. The photons do not have enough energy to eject electrons.
- B. The electrons require a specific wavelength to be emitted.
- C. The metal absorbs all incident light without any electron emission.
- D. The incident light must be in the infrared range to eject electrons.

Correct Answer: A. The photons do not have enough energy to eject electrons.

Explanation: The photoelectric effect demonstrates that light must have a minimum energy (determined by its frequency) to eject electrons from a metal surface. If the photon energy (E=hf) is below the work function, no electrons are emitted regardless of light intensity.

Question 2: Nuclear Decay

A certain isotope has a half-life of 10 hours. How much of a 100-gram sample remains after 30 hours?

- A. 12.5 grams
- B. 25 grams

- C. 50 grams
- D. 75 grams

Correct Answer: A. 12.5 grams

Explanation: After each half-life (10 hours), half of the remaining sample decays. So, after 30 hours (3 half-lives):

- Initial: 100 g
- After 1 half-life (10 hr): 50 g
- After 2 half-lives (20 hr): 25 g
- After 3 half-lives (30 hr): 12.5 g

- Use the half-life formula: remaining amount = initial amount × (1/2)^(time elapsed / half-life).

Special Relativity Questions

- Example: "An observer sees a clock moving at a high speed. Compared to a stationary observer, the moving clock appears..."
- Approach:
- Remember that moving clocks appear to run slower (time dilation).
- Use the concept of frame of reference.

Wave-Particle Duality and Quantum Questions

- Example: "The double-slit experiment demonstrates which of the following?"
- Approach:
- Recognize the interference pattern as evidence of wave behavior in particles like electrons.

Sample Practice Questions and Explanations

Let's analyze some sample questions to illustrate the thought process:

Question 1:

An electron is accelerated through a potential difference of 100 volts. What is its approximate kinetic energy?

a) 100 eV

b) 50 eV

c) 200 eV

d) 1,000 eV
